

EDEN

MEMORY CARE

Drawing from personal family experience with dementia, we envisioned a place where the latest in memory care research and technology could be applied in a caring and safe environment. A place where individualized care plans promote an environment for socialization, education and healthy aging while allowing residents to function at their highest potential with dignity, choice, independence and respect. A place where families are provided support, training and education. We are a brand new, purpose built boutique community.

We incorporate evidence-based Alzheimer's research into our best practices

Research has shown...

People with memory impairment tend to get lost in larger facilities, which elevates anxiety and frustration leading to feelings of loss of independence and dignity. Facility size should be key in your selection.

Eden Memory Care is a 16-bed facility. Residents are more likely to recognize one another, find their room on their own, and have close proximity to main living and dining areas where smell what's cooking, just like at home.

Research suggests...

Having easy access to outside space reduces aggressive behavior and is beneficial for people with dementia.

Our residents enjoy our secured outdoor spaces. Whether they are walking around the paved pathways enjoying the lush greenery, gardening in the raised planting beds, sweeping the back patio or going to check the mailbox in the secured outdoor garden area, we provide opportunities for pleasant memories and to keep them active.

Based on extensive global research...

One of the most important findings was to allow ample daylight into the building. Residents with memory impairment have limited vision and prefer a bright environment where they can easily see their surroundings.

Good lighting in areas where people eat their meals is essential to maximize the chance that people will see, recognize and consume meals and drinks.

Our centrally located large skylight above the dining room is a signature feature which brightens the entire space. Each corridor has secured, glass exit doors, allowing natural light in so residents can see their path clearly.

The facility features large glass windows all around, including outdoor views in each resident room.
